Descrizione del progetto

Description Frase (max. 500 characters):

Augmented reality as learning environment - interactive collaborative elearning with "alive" learning materials.

Project Summary (max. 2000 characters):

With using augmented reality apps, there are no borders for learning contexts or environment. Augmented reality allows to combine and connect real-life scenarios and objects with digital environment perceptions.

Our project starts in autumn 2014, when project group students started to learn augmented reality apps - Aurasma and Collaraps. Then project-group students organized and aura-exhibition-workshop for younger school-mates (<https://www.youtube.com/watch?v=jQ6qI2kRX2Y> [1]) about using mobile apps and making auras. In this way older students are working as mentors for younger. The next step was organizing an exhibition of augmented reality objects made by students from 1st to 3rd grade. Next step in our project was to change it into an international project and we started common project with school on Faroe Islands (Denmark). We are using online workshops and Skype conferences as working tools and we are planned also student exchanges. Students will give an opportunity to practice their skills in real-life situation and practice new pedagogical methods: project-based, problem-based, inquiry-based, game-based learning, flipped classroom etc. Older students can be in the role of mentors to teach younger for innovative ways of using digital media. After common learning students will organize activities (exhibitions, workshops, conferences) to other students to show what they have learned. All materials, made during project, will use educational cloud services to make materials visible.

Da quando è funzionante il vostro progetto?

Obiettivi ed elementi di innovazione

Using augmented reality in learning helps develop equal opportunities in inclusive education and to promote creativity and innovation in education.

Teachers and students are working as partners, advanced students are involved as mentors, all participants have good opportunity to try new digital tools for learning and teaching and to practice new pedagogical methods: project-, inquiry-, problem-, game-based learning, flipped classroom, BYOD-lessons etc.

During projects only free apps are used (Aurasma, Collarapp etc), participants can use their own devices, but for workshops it is possible to use equipment at school. We will use Skype conferences for preparatory work, also social media for groupworks (Facebook groups, Edmodo), and different mobile apps (EdSelf etc), educational resource cloud services will be used.

Risultati

Describe the results achieved by your project How do you measure (parameters) these. (max. 2000 characters):

Participating schools or groups are making during project learning materials to about different topics and subjects. It is possible to integrate project-work with school-curricula, motivate informal learning and participation in local community. During each activity rapid response (voting) systems (Polleverywhere, Mentimeter, Kahoot etc) will be used. After learning activities participants have possibility to demonstrate their knowledge in local community, using world-

cafe type informal conferences to promote active citizenship. All materials collected and used during project will be available in open-source environments (Udutu Learn etc) for teachers as pedagogical resource, but also for informal learning and also for active participation in local community.

How many users interact with your project monthly and what are the preferred forms of interaction? (max. 500 characters):

We have started the project between two school in Estonia and Faroe islands (from both schools 35 students) - and as students can be the project-managers also, maximum number of participants is not expired.

We will use Skype conferences for preparatory work, also social media for groupworks (Facebook groups, Edmodo),and different mobile apps (EdSelf etc), educational resource cloud services will be used.

Sostenibilità

What is the full duration of your project (from beginning to end)?:

Meno di 1 anno

What is the approximate total budget for your project (in Euro)?:

Meno di 10.000 Euro

What is the source of funding for your project?:

Finanziamenti pubblici o privati

Il progetto è economicamente autosufficiente?:

Sì

Since when?:

2015-06-29 22:00:00

Trasferibilità

Has your project been replicated/adapted elsewhere?:

No

What lessons can others learn from your project? (max. 1500 characters):

All participants have good opportunity to try new digital tools for learning and teaching and to practice new pedagogical methods: project-, inquiry-, problem-, game-based learning, flipped classroom, BYOD-lessons, real-life based learning scenarios by using augmented reality.

Are you available to help others to start or work on similar projects?:

Sì

Informazioni aggiuntive

Barriers and Solutions (max. 1000 characters):

Project is based on practical using own digital devices (smartphones, iPads, tablets etc) - if devices are different or using different software - it means that more attention must be paid for instructional materials, video-tutorials etc. Of course there can be some language differences, but it is also good change to learn more.

Future plans and wish list (max. 750 characters):

Through similar projects it is possible for participating groups to share similar problems and similar visions for future. Participants can compare attitudes and visions between citizens of

local communities and will try to find ways how can young people help to solve problems.
Augmented reality can be as sample platform for simulations and for possible solutions.
